DETAILED ACTION

1. Claims 1-9, and 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 2, applicant uses the term "frame member", however, everywhere else in the claims applicant refers to the "frame".

In claim 7, line 3, "first engagement" should be –first engagement surface–.

In claim 8, line 2, after "comprises" "a" should be deleted.

In claim 9, line 2, after "comprises" "a" should be deleted.

In claim 15, line 2, after "having" "a" should be deleted.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 4, 6, 7, 10, 11, 13, 14, 17, 18, and 19 are rejected under 35 U.S.C. 102(a and e) as being anticipated by Nishihira et al.

Nishihira shows a wheelchair with a pivoting arm 23 attached to the frame and drive assembly 14, 15, pivotally attached to the frame. Figure 16b shows the pivoting

Art Unit: 3611

arms having engagement surfaces that are disengaged from each other when the drive assembly is pivoted in one direction and engaged with each other when the drive assembly is pivoted in the opposite direction (shown in Figure 16a). The engagement surfaces shown in Figure 16b are generally semicylindrical. In Figures 17a and 17b the pivot arm 11A and drive assembly (including wheel 1) are pivotally attached to the frame at the same point P1, as broadly recited.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3, 5, 12, and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishihira et al.

Nishihira shows the cylindrical surface on the pivot arm and the recess in the drive assembly support. However, it would have been an obvious reversal of parts to provide the recess in the pivot arm.

6. Claims 8, 9, 15, and 16 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hosino shows a wheelchair with relatively movable running gear for assisting movement over a step.
